

**NASA EARTH EXCHANGE
IN SUPPORT OF THE
NATIONAL CLIMATE ASSESSMENT**

Earth Science Division/NASA Advanced Supercomputing

NASA Ames Research Center

Moffett Field, CA

rama.nemani@nasa.gov

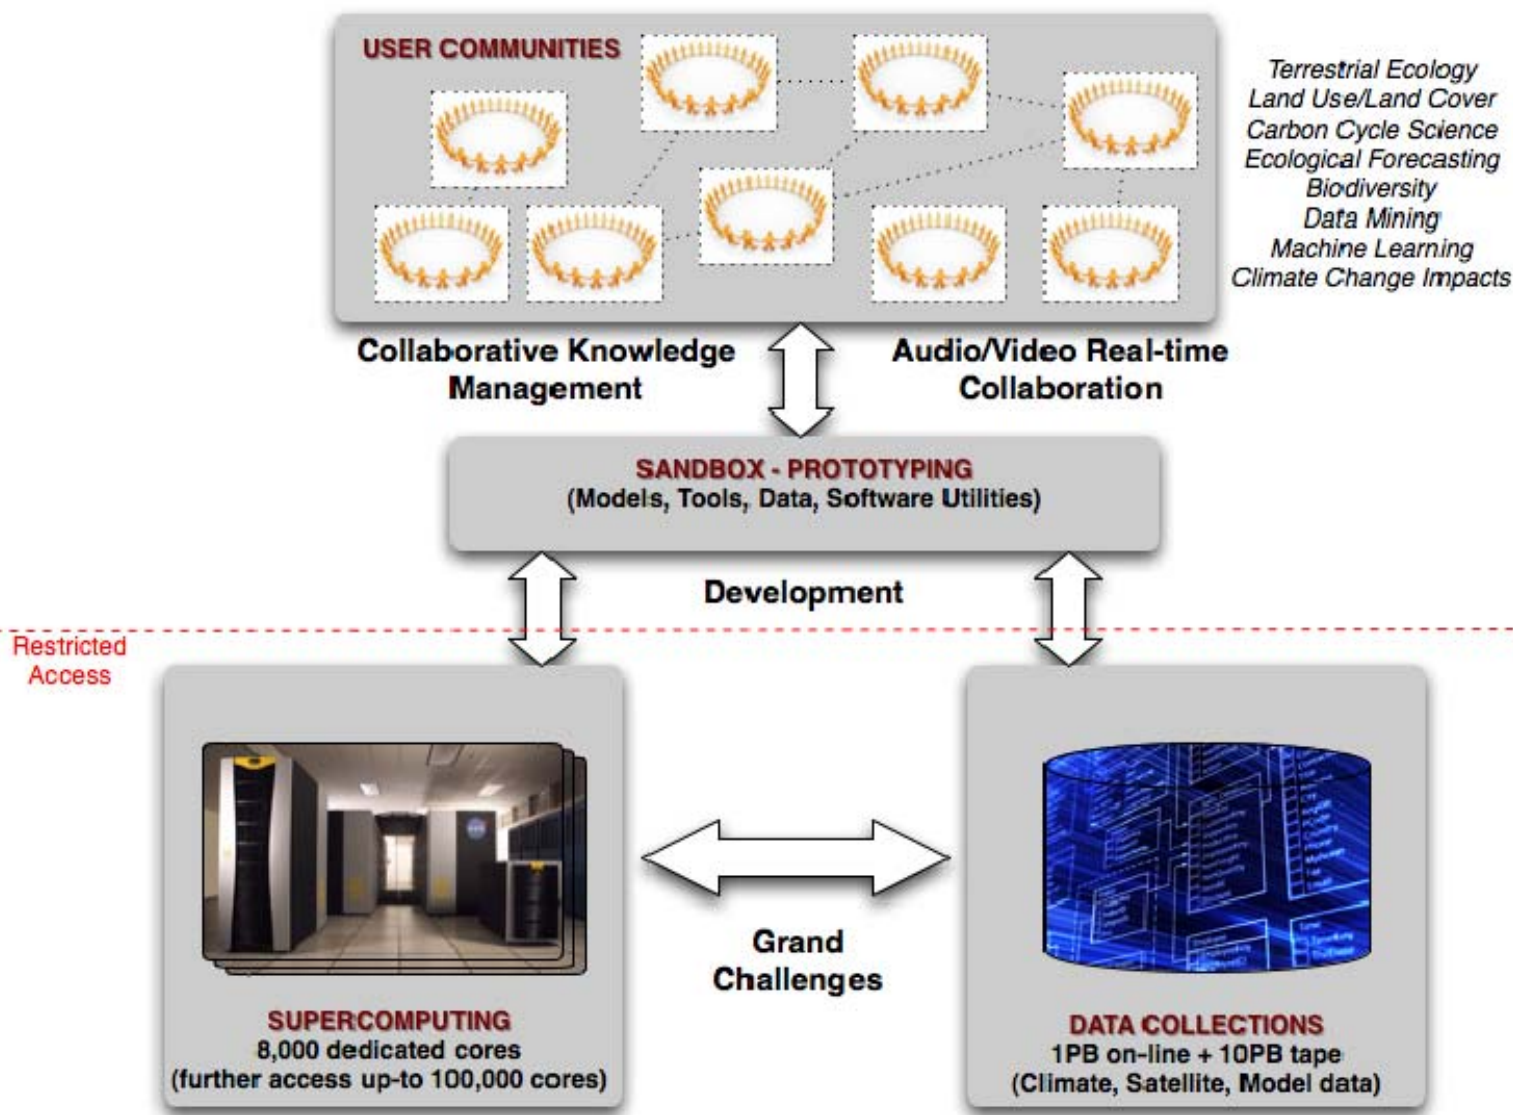

Goals and Objectives

*To provide enabling tools for the Earth
science community supporting
the National Climate Assessments.*

The screenshot shows the NEX NASA Earth Exchange website. The header includes the NEX logo and navigation links: HOME, RESEARCH AREAS, PROJECTS, RESOURCES, ABOUT. Below the header, there's a search bar and a section titled "Dashlink is a public collaborative tool for data mining communities who are interested in aviation systems health". The main content area features a "how do I start?" section with links to register, browse/download data sets, find projects, and connect with people. There's also a "how can I contribute?" section and a "Latest NEWS" section. A "Featured" section highlights a "Data Set: Li-ion Battery Aging Datasets" and an "Algorithm: Li-ion Battery Aging Datasets". At the bottom, there's a software interface showing a file explorer, a terminal window, and a video chat window.

NCA@NEX Objectives

- **Creation/distribution of high resolution historical and projected climate data.**
- **Development of climate change indicators and monitoring:** Analysis of long-term satellite data for the U.S. to quantify spatial and temporal patterns in indicators of terrestrial ecosystem condition.
- **Facilitate climate impacts modeling:** Facilitate ensemble modeling experiments to quantify changes in biogeochemical cycling in response to changes in climate as well as land use.

NEX Activities

- Creating ready-to-use data sets for NCA
- NCA Community Engagement
- Technology Development/NEX

Data sets

- Historical Climate Gridding
 - In collaboration with NTSG/U of MT, we created a 1km daily gridded historical climate data from 1950 to 2010
 - Complimentary to PRISM data but at daily resolution
 - Useful for downscaling GCM output at daily timescales.
 - This dataset supports a number of hydrology/ecosystem models
- 30 years of satellite-derived Leaf Area Index
 - In collaboration with Boston U, we implemented and customized the MODIS LAI algorithm for AVHRR
 - Obtained and processed GIMMS AVHRR NDVI data
 - Created a first generation LAI product spanning 1981 to 2010

NCA Community Engagement

- **Climate gridding**
 - *University of Montana*
 - *California State University*
 - *ORNL*
- **Satellite data analysis**
 - Boston University
 - GSFC
 - University of Maryland
- ***Climate downscaling***
 - Climate Central
 - University of Montana
 - Santa Clara University

NCA Community Engagement

- *Climate data analytics*
 - University of Minnesota
- *Data-model intercomparison*
 - ORNL
 - Northern Arizona University
 - Colorado State University
 - Boston University

NCA Community Engagement

- ***Ecosystem modeling***

- University of Montana
- Oregon State University
- Montana State University
- Yale University
- WHRC

.

- ***Hydrology modeling***

- Climate Central
- BLM
- Santa Clara University

Technology Development/NEX

- NEX infrastructure implementation plan completed
- VisTrails workflow management tools implemented
- Testing iRODS data management

NCA Contributions

- Chapter 5: Evolving Weather and Climate Conditions of the Southwest United States, R. Nemani
- Climate impacts on Ecosystems, NCA, F. Melton
